

Module name: **Introductory Quantum Chemistry**

Academic year: **2017/2018** Code: **CIM-2-322-BK-s** ECTS credits: **3**

Faculty of: **Materials Science and Ceramics**

Field of study: **Materials Science** Specialty: **Biomateriały i kompozyty**

Study level: **Second-cycle studies** Form and type of study: **Full-time studies**

Lecture language: **English** Profile of education: **Academic (A)** Semester: **3**

Course homepage: **—**

Responsible teacher: **prof. dr hab. inż. Koleżyński Andrzej (kolezyn@agh.edu.pl)**

Academic teachers: **prof. dr hab. inż. Koleżyński Andrzej (kolezyn@agh.edu.pl)**

Module summary

The course is intended for undergraduate students and majors interested in gaining basic knowledge about foundations of modern quantum chemistry and its practical applications.

Description of learning outcomes for module

MLO code	Student after module completion has the knowledge/ knows how to/is able to	Connections with FLO	Method of learning outcomes verification (form of completion)
Social competence			
M_K001	Student is prepared to effectively select appropriate methods of computational chemistry as an additional tool in solving common problems met in chemistry and materials science	IM2A_K08	Activity during classes
Skills			
M_U001	Student can analyze practical problem he/she is facing from the quantum chemical viewpoint, select the appropriate approach to solve it and analyze the results of ab initio calculations carried out for a particular system.	IM2A_U02, IM2A_U05	Examination
Knowledge			
M_W001	Student has basic knowledge of fundamentals of quantum mechanics and its most important approximations.	IM2A_W03	Examination
M_W002	Student knows modern methods and tools of quantum chemistry.	IM2A_W03	Examination

FLO matrix in relation to forms of classes

MLO code	Student after module completion has the knowledge/ knows how to/is able to	Form of classes										
		Lectures	Auditorium classes	Laboratory classes	Project classes	Conversation seminar	Seminar classes	Practical classes	Fieldwork classes	Workshops	Others	E-learning
Social competence												
M_K001	Student is prepared to effectively select appropriate methods of computational chemistry as an additional tool in solving common problems met in chemistry and materials science	-	-	-	-	-	+	-	-	-	-	-
Skills												
M_U001	Student can analyze practical problem he/she is facing from the quantum chemical viewpoint, select the appropriate approach to solve it and analyze the results of ab initio calculations carried out for a particular system.	-	-	-	-	-	+	-	-	-	-	-
Knowledge												
M_W001	Student has basic knowledge of fundamentals of quantum mechanics and its most important approximations.	-	-	-	-	-	+	-	-	-	-	-
M_W002	Student knows modern methods and tools of quantum chemistry.	-	-	-	-	-	+	-	-	-	-	-

Module content

Seminar classes

Topics covered in this course

- 1) Wave mechanics, wave-particle duality, Heisenberg's uncertainty principle.
- 2) Operators, eigenfunctions, eigenvalues, the Dirac δ function, Fourier transforms.
- 3) Wave function space, Dirac notation, Hermitian Operators, eigenvalue problem.
- 4) Average values, Ehrenfest's theorem.
- 5) Particle in a box, particles in "square" potentials.
- 6) Time evolution of wave functions and wave packets, the harmonic oscillator.
- 7) Postulates of quantum mechanics.
- 8) Schrodinger representation of QM.
- 9) The Hydrogen atom, hydrogen-like ions, multi-electron atoms, the Pauli principle, electron spin, electronic configuration
- 10) Hartree Fock/SCF method, Gaussian basis sets
- 11) Post Hartree-Fock methods: Møller-Plesset perturbation theory, Configuration

Interaction, Coupled Clusters, Quantum Monte Carlo

12) Application of quantum mechanics to molecules: Born-Oppenheimer approximation

13) Molecular Orbital vs Valence Bond theory

14) Molecular vibrations and rotations

15) Density Functional Theory – Hohenberg-Kohn theorems, Kohn-Sham equations, exchange – correlation potential approximations

Method of calculating the final grade

The final grade is calculated as a weighted average of partial grades: activity during lectures (20%), attendance (10%) and exam results (70%).

Prerequisites and additional requirements

The course is intended for undergraduate students and majors interested in gaining basic knowledge about foundations of modern quantum chemistry and its practical applications for molecular and (to some extent) periodic systems.

Recommended literature and teaching resources

1. Ira N. Levine, Quantum Chemistry, (obligatory)

2. Lucjan Piela, "Ideas of Quantum Chemistry", Second Edition (optional)

3. Martin C.R. Cockett, Graham Doggett, "Maths for Chemists Vol. 1 : Numbers, Functions and Calculus (Tutorial Chemistry Texts)", (optional)

4. Martin C.R. Cockett, Graham Doggett, "Maths for Chemists Vol 2: Power Series, Complex Numbers and Linear Algebra (Tutorial Chemistry Texts)", (optional)

Additional information

During lectures, the foundations of quantum mechanics and particular techniques, approximations and applications to question of chemical interest will be covered. In this course, you will learn the basics of how to describe the electronic structure of atoms and molecules and calculate their properties using quantum chemistry methods.

Student workload (ECTS credits balance)

Student activity form	Student workload
Participation in lectures	30 h
Realization of independently performed tasks	40 h
Examination or Final test	2 h
Contact hours	5 h
Summary student workload	77 h
Module ECTS credits	3 ECTS
